APPENDIX B DATA COLLECTION

Buildings and Facilities

Excluded Buildings/Process Operations

The Federal agencies that own or control buildings are required to report the energy consumption in these buildings to FEMP 45 days after the end of each fiscal year. The General Services Administration (GSA) reports the energy of buildings it owns and operates, including usage by other Federal agency occupants. For buildings which have been delegated by GSA to other agencies, the individual agencies are responsible for reporting the energy consumption and square footage figures.

The data shown in this report do not include leased space in buildings where the energy costs are a part of the rent and the Federal agency involved has no control over the building's energy management.

The Federal agencies submit their annual reports expressed in the following units: megawatt hours of electricity; thousands of gallons of fuel oil; thousands of cubic feet of natural gas; thousands of gallons of liquefied petroleum gas (LPG) and propane; short tons of coal; billions of Btu of purchased steam; and billions of Btu of "other." DOE reviews this data for accuracy and confers with the submitting agency to clarify any apparent anomalies. The data are then entered into a computer database management program.

The tables shown in this Annual Report are expressed in billions of Btu derived from the following conversion factors:

Electricity	-	3,412 Btu/kilowatt hour
Fuel Oil	-	138,700 Btu/gallon
Natural Gas	-	1,031 Btu/cubic foot
LPG/Propane	-	95,500 Btu/gallon
Coal	-	24,580,000 Btu/short ton
Purchased Steam	-	1,000 Btu/pound

In addition, the Federal agencies annually report to FEMP the gross square footage of their buildings and the cost of their buildings' energy.

This report excludes those agencies that have been unable to provide complete fiscal year consumption data prior to the publication date. All agency omissions, as well as any anomalies in the data, are indicated by footnotes on the tables or in the text of the report.

Vehicles and Equipment

Federal agencies are required to report the energy consumption of their vehicles and equipment to FEMP within 45 days after the end of each fiscal year.

The fuels used in vehicles and equipment are automotive gasoline, diesel and petroleum distillate fuels, aviation gasoline, jet fuel, navy special, liquefied petroleum gas/propane, and "other." All the fuels in this category with the exception of "other" are reported in thousands of gallons. "Other" is reported in billions of Btu.

The conversion factors for these fuels are:

Automotive Gasoline	-	125,000 Btu/gallon
Diesel-Distillate	-	138,700 Btu/gallon
Aviation Gasoline	-	125,000 Btu/gallon
Jet Fuel	-	130,000 Btu/gallon
Navy Special	-	138,700 Btu/gallon
LPG/Propane	-	95,500 Btu/gallon

Missing data and anomalies are addressed in the same fashion as those described previously in this appendix.

Calculation of Estimated Carbon Emissions

Carbon emissions were calculated by multiplying energy consumption for each fuel type by an associated carbon coefficient shown below. These coefficients are derived from DOE/EIA-0573(98), *Emissions of Greenhouse Gases in the United States, 1998*, October 1999; Tables 11 and B1.

Carbon coefficients are calculated by dividing the carbon content of a particular fuel (for example, 0.85 metric tons of carbon per ton of fuel) by the energy content of that fuel (say, 43 million Btu per metric ton), producing an emissions coefficient (in this example, 19.8 million metric tons of carbon per quadrillion Btu (quad), which is the same as 19.8 metric tons per billion Btu). The different coefficients result from differences in the amount of carbon released when the various fossil fuels are burned. The amount of carbon released depends, in turn, on the density, carbon content, and gross heat combustion of the fuel in question.

The coefficients used in this report are as follows:

Energy Type	Metric Tons/Billion Btu (Site-Delivered)
Electricity	48.17
Fuel Oil	19.95
Natural Gas	14.47
LPG/Propane	16.99
Coal	25.63
Purchased Steam	35.63
Auto Gas	19.35
Diesel	19.95
Aviation Gas	18.87
Jet Fuel	19.33
Navy Special	21.49

The electricity coefficient is based on 1995 carbon emissions from electric utilities per 1995 site-delivered electricity consumption. (Table 11, DOE/EIA-0573(98) and Table 8.1, DOE/EIA-0384(98), Annual Energy Review 1998.) This coefficient of 48.17 metric tons per billion Btu (or million metric tons per quad) is applied to site-delivered Btu consumption of electricity. It is equivalent to a coefficient of 14.12 metric tons per billion Btu used for primary Btu consumption of electricity and reflects a generation mix of electricity consumption of approximately 51 percent coal, 15 percent natural gas, 2 percent fuel oil, 20 percent nuclear, and 12 percent hydro/renewables.

The purchased steam coefficient applies the coefficient for coal to the primary energy Btu (converted from site-delivered Btu by using a factor of 1.39).

¹Changes in energy costs from 1985 should not be construed as savings resulting from Federal energy management activities. Many variables contribute to fluctuations in annual energy costs, including changes in square footage, building stock, weather, energy efficiency investments, service level, fuel mix, fuel prices, and vehicle, naval, and aircraft fleet composition. This table incorporates revisions to previously published energy consumption and cost data submitted to DOE by Federal agencies.

APPENDIX D

BUILDINGS EXEMPTED FROM NECPA'S PERFORMANCE GOAL IN FY 1998

Section 543(a)(2) of NECPA states, "An agency may exclude from the requirements of paragraph (1) any building, and the associated energy consumption and gross square footage, in which energy intensive activities are carried out. Each agency shall identify and list in each report made under section 548(a) the buildings designated by it for such exclusion." These buildings are not included in the calculations for determining performance toward the buildings Btu/GSF reduction goals. Instead, they are included under the category of excluded buildings/process energy. The energy consumed in these buildings is included on tables and figures which show total consumption (buildings and facilities, vehicles and equipment, and excluded buildings/process).

Department of Defense

Process energy use at Department of Defense (DOD) facilities, or “buildings” under the definition of PL 100-615, is separately identified from the building and facilities energy use reported under the goal of section 543. Some DOD facilities have both building and facility use, and process energy use. DOD actively manages process energy facilities in such a manner as to achieve a 10 percent energy efficiency improvement goal by FY 1995. The following lists those facilities which report process energy and are exempt from NECPA's performance goal.
